SUMMARY

Data Scientist, AI & Analytics Engineer who turns raw data into decisions, decisions into automation, and automation into scalable products. Experienced in building analytics platforms, AI-powered applications, forecasting systems, BI dashboards, APIs, and SaaS products across fleet intelligence, HR, education, and operational environments. Combines data science, machine learning, business intelligence, data engineering, and full-stack development to solve business problems end-to-end—from extracting and analyzing complex datasets to engineering the systems that make insights actionable. Delivered measurable impact including 11 hours/day of manual reporting eliminated, 77.9% forecasting accuracy, 11.5% projected revenue improvement, and 25% faster reporting.

TECHNICAL EXPERTISE

DATA SCIENCE & MACHINE LEARNING

Python • Machine Learning • Statistical Analysis • Predictive Modeling • Demand Forecasting • XGBoost • Prophet • Data Analysis

ARTIFICIAL INTELLIGENCE

Artificial Intelligence • Generative AI • Retrieval-Augmented Generation (RAG) • AI Applications • Knowledge Retrieval • Intelligent Assistants

DATA ENGINEERING & INTEGRATION

SQL • REST APIs • API Integration • Data Processing • Data Pipelines • Telematics Data • Cloud Databases • Third-Party Integrations

BUSINESS INTELLIGENCE

Power BI • Tableau • Executive Dashboards • Real-Time Dashboards • KPI Reporting • Operational Analytics • Data Visualization

SOFTWARE ENGINEERING

Python • TypeScript • JavaScript • React • React Native • Next.js • REST APIs • MongoDB • PostgreSQL

PROFESSIONAL STRENGTHS

Analytical & Critical Thinking • Problem Solving • Strategic Decision-Making • Data-Driven Thinking • Business & Technical Communication

SELECTED DATA SCIENCE PROJECTS

Software & SAAS Product Development

Multi-Tenant SaaS Platforms

Next.js|React| TypeScript| MongoDB| Auth.js| Server Actions| npm| Turborepo

- Developed multi-tenant SaaS platforms across HR, education, and library management.
- Digitized manual processes into centralized, secure workflows.
- Built HR features including employee management, attendance, leave, payroll, salary advances, and approvals.
- Developed library features for resource management, borrowing/returns, users, and reporting.
- Built a multi-tenant school management platform with isolated school workspaces.
- Implemented JWT authentication, role-based access control, onboarding, invitations, and audit logging.
- Structured authentication, permissions, and business logic into reusable packages.

[Yakwetu Climate-Based Demand & Pricing Forecasting](#)

Python | XGBoost | Prophet | Power BI | Forecasting | Business Analytics

Analyzed 30,000+ user activity records alongside 9,000+ weather observations to investigate the relationship between weather conditions, audience demand, and customer behaviour.

- Developed demand forecasting models using XGBoost and Prophet.
- Built Power BI dashboards communicating demand patterns, pricing insights, and revenue opportunities.
- Achieved 77.9% forecasting accuracy.
- Identified pricing strategies with projected revenue improvement of up to 11.5%.

EXPERIENCE

Data Scientist, ControlTech Limited | January - Present | Nairobi

Design and develop enterprise analytics, AI, and software solutions focused on fleet intelligence, operational performance, automation, and decision support.

Enterprise Fleet Intelligence

- Designed and developed fleet intelligence platforms integrating Wialon GPS telemetry with interactive dashboards for real-time fleet monitoring.
- Transformed high-volume telematics data into insights covering vehicle utilization, mileage, trips, fuel consumption, driver behaviour, speeding, route compliance, and operational events.
- Developed customized fleet management and analytics solutions providing centralized visibility across client environments.
- Integrated enterprise applications with telematics APIs, cloud databases, and third-party services.
- Automated fleet reporting workflows by connecting telematics APIs, data processing, Excel reporting, and automated distribution which reduced manual control-room reporting workload by approximately 11 hours per day.

AI & Intelligent Applications

- Designed and implemented an AI-powered Helpdesk Assistant using Retrieval-Augmented Generation (RAG).
- Enabled employees to query internal SOPs and organizational knowledge bases using natural language.
- Connected AI capabilities with enterprise knowledge to create a practical internal decision-support tool.

SALAMA YOUTH HUB — Nairobi, Kenya

Intern Data Analyst | Oct 2024 – Jan 2025

- Analyzed beneficiary data to identify program effectiveness and areas for improvement.
- Produced monthly reports that informed program strategy and improved service delivery.
- Tracked key performance metrics and presented findings to leadership.
- Facilitated weekly support groups and open discussions, contributing to a 30% increase in youth participation.

Kenya Bureau of Standards National Quality Institute

Attachment — Data & Analytics | Apr 2024 – Jul 2024

- Developed interactive dashboards using Power BI and Tableau.
- Reduced reporting time by 25%, enabling faster data-driven decision-making.
- Coordinated logistics and supported the National Quality Institute Integrated Management Systems.
- Contributed to module development and conferencing initiatives supporting stakeholder engagement and membership growth.

EDUCATION

KARATINA UNIVERSITY — Kenya

Bachelor of Science in Applied Statistics with Computing
Second Class Honors

MORINGA SCHOOL — Kenya

Advanced Data Science | Graduated November 2025

ALLISON

Certificate in Google Analytics 4

MICCATO AMERICA SHARE

Certificate in Computer Packages

Scan To View Portfolio & More Projects

ADDITIONAL EXPERIENCE

VOLUNTEER — MORINGA SCHOOL TECH EXPO 2025

Volunteered at the Moringa School Career Fair / TechEXPO 2025.
